# Open Source Robot Controls

Arduino/Netduino Powered Robots

We've been cooking up a completely (low cost) open source robot control system that allows robot enthusiasts to control their creations using only an Android phone (or any other WiFi enabled device). We're using Arduinos and Netduinos onboard the robots to process the control data. To demonstrate this system, we've put together a few robots (pictured above) that show off the potential of using a system such as ours. Feel free to ask us any questions!
